#### **DETAILED ACTION**

1. The request filed on 1/6/2006 for Continued Examination (RCE) under 37 CFR 1.114 based on parent Application No. 09/694293 is acceptable and a RCE has been established. An action on the RCE follows.

## Claim Rejections - 35 USC § 102

- 2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
  - (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,3-5,7,10-13 and 30-33 are rejected under 35 U.S.C. 102(b) as being anticipated by Krueger et al (5,578,076).

Krueger et al disclose in Figs. 1-2, a heart valve fastener (10) having the limitations as recited in claims 1 and 3, including: one pair of arms (16), where arms pivot from one orientation to a gripping position with ends of the paired arms being directed toward each other (at best seen in fig. 2 where the curved segment 74 is capable of being directed toward the curved segment 76. Regarding the intended use of the pair of arms are sized and adapted for fastening two adjacent tissue heart valve leaflets, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In the instant case, the arms of Krueger would have been capable of performing the use as claimed. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art.

See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA

Application/Control Number: 09/694,293

Art Unit: 3731

Page 3

1963). As to claims 4-5,7,10-13, a system further has a catheter or a trocar (see col. 2, lines 63-67, col. 3, line 1 and col. 4, lines 14-18) that is inherently capable for deployment into a human heart, where the paired arms (16) extend toward each other when the fastener is in a gripping position, and where the arms flex to a low profile position to fit within the catheter, where the fastener further has a shaft (60) that is releasably holding the fastener of the shaft

Regarding claims 30-33, Krueger et al disclose in Fig. 18, where a fastening member comprises a cap (370) and a gripper (366) comprises a plurality of arms (374) from a pivot (372), where each arm has a spike (376), and where the cap comprises a locking mechanism to lock the gripper in a lock position (see col. 6, lines 41-51), and where the fastener further has a flexible rod (125) which has a disengaging mechanism (fig. 5) which permits the rod to releasably holding the cap.

#### Allowable Subject Matter

3. Claims 18,20,23-26 and 28 are allowed.

The following is a statement of reasons for allowance: None of the prior art of record, alone or in combination, discloses or suggests where a heart valve repair instrument comprising a cap that is located distal to the pivot and the pivot is located distal to a shaft, where a flexible rod connects to the cap to provide for movement of the cap relative to the pivot of the gripper and the shaft by pulling the flexible rod, where the cap has an opening that can be positioned over the pivot to lock the arms in a closed position.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Application/Control Number: 09/694,293

### Response to Arguments

Applicant's arguments filed 11/7/2005 with regard to a heart valve leaflet fastener 4. comprising at least one pair of arms, the pair being sized and adapted for fastening two adjacent tissue heart valve leaflets has been considered but are still deemed nonpersuasive because as set forth in the last Office Action, page 2, dated 7/7/2005. For example: it is noted that Krueger et al disclose in Figs.1-2, a heart valve fastener (10) including: one pair of arms (16), where arms pivot from one orientation to a gripping position with ends of the paired arms being directed toward each other (at best seen in fig. 2 where the curved segment 74 is capable of being directed toward the curved segment 76. Regarding the intended use of the pair of arms are sized and adapted for fastening two adjacent tissue heart valve leaflets, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In the instant case, the arms of Krueger would have been capable of performing the use as claimed. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See In re Casey, 152 USPQ 235 (CCPA 1967) and In re Otto, 136 USPQ 458, 459 (CCPA 1963). In response to applicant's argument that Krueger reference does not disclose every element of claim 30. The examiner, respectfully, disagrees. As claim 30 is currently written, it can be interpreted broadly that the Krueger reference at least discloses in Fig.

Application/Control Number: 09/694,293 Page 5

Art Unit: 3731

18, where a fastening member comprises a cap (370) and a gripper (366) comprises a

plurality of arms (374) from a pivot (372), where each arm has a spike (376), and where

the cap comprises a locking mechanism to lock the gripper in a lock position (see col. 6,

lines 41-51).

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Victor X. Nguyen whose telephone number is (571) 272-4699.

The examiner can normally be reached on M-F (8-4.30 P.M).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Anh Tuan Nguyen can be reached on (571) 272-4963. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
